Ishita Sinha

+918252732075 GitHub ishitasinha16@gmail.com LinkedIn

Results-driven Data Analyst with experience conducting end-to-end analysis, from ETL workflows to interactive visualization. Proficient in SQL, Python, Power BI, and Tableau, with a proven ability to transform complex datasets into actionable insights that drive KPIs, optimize business processes, and support strategic decision-making.

SKILLS

- **Languages:** Python (NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn), SQL, Java, JavaScript
- **Business Intelligence & Data Visualization:** Microsoft Power BI, Tableau, Microsoft Excel (Pivot Tables, VLOOKUP), Dashboard Development, Interactive Reporting
- **Data Analysis & Data Modeling:** Data Cleaning, Data Transformation, Exploratory Data Analysis (EDA), Data Modeling, Statistical Analysis, Key Performance Indicator (KPI) Analysis, Data Aggregation
- **Data Processing & ETL:** ETL Pipelines, Tableau Prep Builder, Microsoft Power Query, Data Extraction, Data Integration
- **Machine Learning & Statistical Techniques:** Regression, Classification, Clustering, Supervised & Unsupervised Learning, Feature Engineering, Model Evaluation, NLP, Generative AI
- **Databases:** MySQL, MongoDB, Firebase
- **Tools & Platforms:** GitHub, Jupyter Notebook, VS Code, Postman, Figma
- **Frameworks & Automation:** ReactJS, NodeJS, ExpressJS, Frappe, Selenium, Microsoft Power Automate

EXPERIENCE

Boston Scientific

Data Analyst ***Aug 2024 – Present***

- Engineered 10+ interactive Tableau dashboards to track operational performance, incorporating DAX-based logic and calculated fields to enable precise, stakeholder-driven trend analysis, while applying predictive modeling, supervised learning concepts, and regression-based approaches to generate insights for business decision-making.
- Visualized performance gaps using advanced visualizations to highlight key areas for improvement, and drove actionable insights through exploratory data analysis, trend evaluation, and statistical techniques, identifying critical performance drivers, patterns, and seasonal variations, while leveraging feature importance analysis, model interpretation, and performance evaluation metrics to enhance analytical depth.
- Streamlined data preparation using Tableau Prep Builder to automate data cleaning, transformation, and validation, ensuring high-quality, reliable reporting, while enabling feature engineering, data preprocessing pipelines, and structured datasets to support machine learning workflows, model training readiness, and analytical solutions.

IT Intern ***Jan 2024 –Jun 2024***

- Developed interactive Power BI and Tableau dashboards in collaboration with Enterprise Architecture, enhancing data visibility and enabling actionable insights for leadership, while integrating analytics dashboards with enterprise collaboration tools to drive data-driven decision-making across departments.
- Engineered ETL processes using Excel, Power Query, and DAX to transform raw data from 4+ sources into consistent schemas, ensuring reliable reporting inputs, and automated operational workflows by building custom applications with Microsoft Power Apps and Power Automate to improve team efficiency.
- Designed a centralized SharePoint hub using Figma to organize 5+ enterprise dashboards, improving user experience, accessibility, and overall data discoverability

Elastic Run

Software Developer Intern ***May 2023 – Jul 2023***

- Developed a User Access Management System using the Frappe Framework to manage user permissions and access logs across enterprise systems, improving traceability and supporting secure, efficient system operations.
- Designed and implemented custom Doctypes and leveraged database structures to organize user data, enabling scalable, secure management of user roles and activity logs.
- Conducted automated unit testing using Python, achieving 94% test coverage, which enhanced application reliability and reduced potential system errors.

PROJECTS

Behavioral Churn Radar Dashboard | GitHub

Ishita Sinha

+918252732075 GitHub ishitasinha16@gmail.com LinkedIn

- Designed and developed a multi-layer churn analytics dashboard using Power BI to monitor subscription health, revenue at risk, and user engagement patterns, supported by an end-to-end data model integrating behavioral and operational metrics for interactive reporting and drill-down analysis.
- Implemented advanced DAX measures and visualizations to enable dynamic filtering, segmentation, and performance tracking within the dashboard, enhancing analytical depth and usability.
- Performed churn analysis, cohort analysis, behavioral analysis, and funnel analysis to track user retention patterns, identify early indicators of customer drop-off, and uncover friction points impacting user engagement.

Career Bloom | GitHub

- Developed a machine learning-based career recommendation system to predict suitable job roles based on user inputs, enabling personalized career guidance, supported by data preprocessing, feature encoding, and exploratory data analysis (EDA) to identify patterns and improve model performance.
- Trained and evaluated multiple classification models, selecting the optimal model based on accuracy and performance metrics, ensuring reliable and effective recommendations.
- Built an interactive React frontend integrated with a backend service to deliver real-time predictions and recommendations, providing interpretable insights to help users understand potential career paths based on their skills and preferences.

Resume IQ | GitHub

- Developed an NLP-based resume screening system using Sentence Transformers and cosine similarity to match resumes with job descriptions, enabling users to view match scores along with identified matched and missing skills.
- Implemented text preprocessing and PDF parsing to extract and structure resume data, enabling efficient and scalable candidate evaluation.
- Built an interactive frontend and backend pipeline to deliver real-time resume matching insights, supporting data-driven hiring decisions.

CERTIFICATIONS

- **Preparing Data for Analysis with Microsoft Excel:** Learned data cleaning, structuring, and preparation techniques for analytical workflows.
- **Ask Questions to Make Data-Driven Decisions:** Learned structured problem-solving approaches for defining business questions, stakeholder requirements, and analytical objectives.
- **Using Python to Interact with Operating System:** Applied Python scripting to automate operating system tasks, manage files and processes, and work with system-level data. Utilized regular expressions, Bash scripting, and Python automation to streamline repetitive IT and system administration tasks.
- **Prepare Data for Exploration:** Gained hands-on experience in collecting, organizing, and structuring datasets using spreadsheets and database concepts. Applied techniques for data validation, data types management, and dataset preparation prior to analysis.

EDUCATION

- **Sikkim Manipal Institute of Technology** BTech (Computer Science) ***2024***
